Professional Summary

Platform Engineer with 15+ years in IT, specializing in full-stack, distributed systems and event-driven microservices for finance, e-commerce, and travel sectors.

Key Expertise:

- ✓ **Product Development:** Delivers full-stack SaaS platforms with Java (17/21) and Spring Boot 3, ReactJS 18, sync and async communication, supporting 12-factors; aligning tech to business requirements.
- ✓ **Architecture:** Designs reliable, event-driven systems using Kafka Streams, Apache Camel, and Saga/Event-Sourcing.
- ✓ **Cloud & Infrastructure:** Proficient in Kubernetes/OpenShift; led 20+ enterprise migrations and boosted CI/CD efficiency by 60%.
- ✓ **Data Engineering:** Builds fast ETL and stream-processing engines for investment and retail data.

Technical Skills

Languages: Java 17+, TypeScript/JavaScript, SQL (PostgreSQL/MySQL), PHP 8+, HTML5, CSS3

Backend: Spring Boot 3+, Hibernate/JPA, MapStruct, Apache Camel, Jackson, Laravel, Symfony, Doctrine ORM

Frontend: Angular 13+, React 18+, MUI, Mantine, Bootstrap, Vitest, Cypress

Data/Messaging: Kafka (Avro), RabbitMQ, MongoDB, Couchbase

CI/CD & DevOps: GitHub Actions, GitLab CI, Jenkins, Drone CI, Docker, Flyway/Liquibase

Tools/Testing: JUnit 5, Mockito, WireMock, Maven, Gradle, npm, Swagger/OpenAPI

Cloud/Orchestration: Kubernetes, OpenShift, AWS, Google Cloud Run, Docker

Work Experience

- IQ Key Value Foundation – Open-Source, Founder/Technologist (2021-Present)
- DataArt Solutions, Inc. – Senior Software Engineer (2021-2025)
- Amadeus IT Group SA – Software Engineer (2016-2021)
- WellCart – Tech Lead/Founder (2012-2016)
- Magento – Software Developer (2009-2011)

Recent Notable Projects

Founder & Lead at IQ Key Value Platform

Built an open-source SaaS microservices platform featuring a unified stack (Spring Boot, React, Rabbitmq, Kubernetes), secure integration, observability, and efficient data processing for streamlined deployment and management.

Complex ETL Engine on Top of Kafka Streams

Client: Major European asset manager

Key Contributions:

- ✓ Built microservices with Apache Camel, Kafka Streams, Hibernate, Java, and PL/SQL.
- ✓ Utilized Spring Boot/Data, PostgreSQL, Docker, Jenkins, OpenShift, SonarQube, Maven.

- ✓ Developed a custom business rules system and ETL engine.
- ✓ Migrated 20+ apps to OpenShift 4, enhancing scalability and reducing costs.
- ✓ Established container workflows and monitoring (Prometheus, Grafana, Loki, Promtail).
- ✓ Managed code quality, documentation, change management, and third-line support.

Product Information Management Solution

Client: Home improvement & gardening retailer

Overview:

Developed an enterprise PIM system with microservices (Kafka, REST APIs), Angular UI, event sourcing, and distributed transactions on multi-cloud platforms.

Technologies:

Spring Boot/Security/Data, PostgreSQL, Hibernate, Kafka, Avro, Elasticsearch, Kibana, JUnit, Mockito, WireMock, Docker, Kubernetes, Jenkins, Helm, Vault, SonarQube, SpotBugs, PMD, Maven.

Responsibilities:

Designed and tested Java microservices, gathered requirements, and supported development, testing, code reviews, and releases to align with business goals.

ETL Engine for Processing Hotel Content

Client: Global IT Solutions Provider (Travel Industry)

Overview:

Built a batch ETL system with XQuery, Java, PL/SQL, Node.js, Spring, and Hibernate. Used Kafka, Apache Camel, Docker, Kubernetes, OpenShift, and SonarQube.

- ✓ Integrated content transformation and aggregation systems
- ✓ Managed GDS mapping and connector logic
- ✓ Developed Angular 12+ microservices and web apps
- ✓ Enhanced ETL speed using batching and parallelism
- ✓ Managed workflows with Spring Batch over SOAP, REST, and sFTP
- ✓ Improved efficiency via optimization, testing, and analysis
- ✓ Monitored processes using Prometheus, Grafana, ELK Stack, and OpenShift dashboards

B2B Hotel Booking Platform

Client: Global travel IT provider

Overview:

Built a distributed system for business hotel bookings, merging reservations and content from multiple providers.

Technologies: PHP, Go, JavaScript, Java, SQL, MariaDB, Docker, RabbitMQ, Redis, Elasticsearch, MongoDB, Memcached, Cassandra, CouchDB, InfluxDB.

Key Responsibilities & Achievements:

- ✓ Designed and maintained scalable platform features
- ✓ Integrated data via REST, SOAP, and file-based sources
- ✓ Automated CI/CD pipelines and unit testing
- ✓ Led a migration that increased productivity by 40%
- ✓ Collaborated with leadership and cross-functional teams
- ✓ Managed Agile processes for a 20+ member team
